The front desk of this corporate headquarters welcomes with 2,700K dimmable LEDs behind the upper cabinet and wood wall to accentuate floating details. Square HIR MR16 flangeless downlights illuminate the desk. The playful “pickup sticks” pattern on the ceiling features narrow flangeless dimmable T5 luminaires with batteries, meeting requirements for egress, while halogen fixtures accent artwork. The architect created a unique louvered ceiling and requested no downlights. Dimmable T5HO cove light fixtures came to the rescue creating a soft glow on the ceiling and providing 30 footcandles below. The fluorescent blends with the flangeless halogen downlights placed at ceiling joint intersections. HIR MR16 lamps conserve energy in halogen luminaires. The customized halogen accent fixture is trimless for a clean installation. Linear LED light strips illuminate the wood ceiling. The client is sensitive to bright light, so all fixtures have quality glare control. To enhance the floating staircase, linear LED lighting accents the steps from above and below. Since the open-office area is for computer use, narrow T5 pendants provide 20 footcandles on the desks. The slim fixture creates an interesting transition between the drywall and acoustic ceilings.
